

# DOMESTIC COMPOSTING

**a simple, quick, sustainable  
ACTION!**

**Reduce your garbage can volume by at least 50 kg per year and get free, natural fertilizer.**

The act of transforming into compost, directly from home, some organic waste such as meal, fruits and vegetables leftovers.

With good organisation, and by following a few basic rules, managing organic waste at home quickly becomes natural.

## **Advantages:**

- Reduced waste volume
- Reduced plastic bags consumption
- Reduced cost of waste transportation to landfills
- Reduced GHG (and other noxious gases) emissions after burial
- Provides compost that is useful for domestic horticultural activities
